Description

1. Adopting an internal and external strong earthquake resistant structure design, it effectively solves problems such as bulb detachment, shortened bulb life, and bracket fracture caused by strong vibrations.
2. Using high-efficiency gas discharge lamps as light sources, the bulb has a lifespan of over 10000 hours, making it particularly suitable for outdoor large-scale unmanned lighting.
3. It has good electromagnetic compatibility and will not cause electromagnetic interference to the surrounding environment.
4. The overall heat dissipation of the lamp is good, which can reduce the probability of failure.
